

Budget Planning and Cost Optimisation Training Course

OGI-1274 · 5 days · 15 CPD hours · English

Overview

The Oil and Gas Budget Planning and Cost Optimisation Training Course offered by [Institute For Oil & Gas Training](#) develops the financial planning and expenditure management capabilities required by organisations across the petroleum industry. This Oil and Gas Budgeting Training programme focuses on preparing reliable budgets, evaluating investment requirements, managing operational expenditure, and improving financial control across exploration, production, processing, transportation, and associated activities.

Budget management in the oil and gas sector involves complex financial decisions influenced by production targets, asset conditions, drilling schedules, contractor agreements, equipment requirements, market prices, and regulatory obligations. Inaccurate estimates, delayed projects, changing production volumes, and insufficient cost monitoring create challenges for financial performance and operational planning. Effective Petroleum Budget Planning helps organisations establish realistic financial expectations, allocate resources appropriately, and maintain control over expenditure throughout the operating cycle.

The course examines the connection between financial planning and operational delivery. Participants develop an understanding of capital expenditure and operating expenditure, investment appraisal, cost estimation, production forecasting, cash flow planning, and expenditure variance analysis. The programme also addresses budgeting responsibilities under joint venture arrangements and Production Sharing Contracts, including cost recovery provisions, expenditure approvals, and financial reporting obligations.

Through practical Oil and Gas Cost Control methods, participants learn to evaluate budget assumptions, investigate deviations between planned and actual expenditure, and identify opportunities for improvement. Petroleum Cost Estimation techniques support more consistent financial planning for drilling campaigns, maintenance activities, contractor services, production facilities, and logistics. Participants also assess the financial implications of changing oil prices, project delays, production interruptions, and escalating service costs.

The programme connects these responsibilities with CAPEX and OPEX Management and Oil and Gas Financial Planning. Participants examine how asset-level financial plans contribute to corporate budgets and how revised operational assumptions affect cash flow and investment priorities. Oil and Gas Budget Forecasting provides a structured approach to updating financial projections and supporting management decisions when business conditions change.

Institute For Oil & Gas Training delivers this programme through industry-relevant instruction, practical exercises, case studies, and financial assessment activities. Participants strengthen their ability to prepare budgets, evaluate costs, monitor performance, and communicate financial information across operational and management teams. The resulting capabilities support more disciplined expenditure management, better resource allocation, and informed financial decision-making throughout the petroleum value chain.

Objectives

- Explain budgeting requirements across upstream, midstream, and downstream petroleum operations.
- Apply rolling budgets, zero-based budgeting, and activity-based budgeting according to organisational requirements.
- Differentiate capital expenditure from operating expenditure and classify fixed, variable, and semi-variable costs.
- Identify the main factors influencing drilling, production, maintenance, logistics, and HSE expenditure.
- Prepare capital budgets for exploration, appraisal, development, facilities, pipelines, and terminals.
- Apply net present value, internal rate of return, payback period, and sensitivity analysis in investment evaluation.
- Assess the financial effects of oil price changes, production variations, project delays, and cost escalation.
- Estimate operating expenditure using historical information, benchmarking, cost norms, and supplier pricing.
- Relate production forecasts to operating expenditure and operating cost per barrel of oil equivalent.
- Investigate budget variances and identify the operational and financial factors contributing to deviations.
- Explain budgeting responsibilities under joint venture arrangements and Production Sharing Contracts.
- Assess cost recovery provisions, non-recoverable expenditure, partner approvals, and relevant submission requirements.
- Integrate capital expenditure, operating expenditure, production, revenue, and cash flow into consolidated budgets.
- Apply rolling forecasts and scenario analysis to changing operating conditions.
- Use performance indicators, reporting dashboards, and periodic reviews to monitor financial performance.

Training methodology

Institute For Oil & Gas Training applies a practical delivery approach that connects budgeting principles with the financial and operational demands of oil and gas businesses. The course combines professional instruction, realistic business scenarios, case study discussions, individual exercises, collaborative activities, and applied financial analysis.

Participants examine budgeting challenges drawn from exploration and production activities, drilling programmes, gas processing facilities, pipelines, and supporting infrastructure. These scenarios demonstrate how production

requirements, project complexity, asset maturity, contractor arrangements, and operational constraints influence financial estimates.

Case studies examine situations involving drilling expenditure overruns, project delays, unexpected operating costs, production shortfalls, and disagreements between joint venture partners. Participants assess the reasons behind these problems, consider their financial consequences, and determine appropriate responses to improve budget control.

Practical activities develop participants' ability to estimate expenditure, classify costs, prepare financial projections, and evaluate budget performance. They apply cost estimation techniques to operating and capital requirements, investigate expenditure variances, and examine the relationship between production forecasts and operating costs.

Scenario-based learning introduces changes in oil prices, production volumes, drilling schedules, equipment availability, and service costs. Participants evaluate the effects of these changes on investment decisions, cash flow, and operating budgets. They also consider when existing assumptions require revision and how financial updates should be communicated to relevant stakeholders.

Group activities encourage coordination between finance, engineering, production, procurement, project controls, and asset management teams. Participants examine how different departments contribute to budget preparation and how operational decisions affect financial outcomes.

The programme concludes with an integrated budgeting assignment based on a hypothetical exploration and production asset. Participants consolidate capital expenditure, operating expenditure, production assumptions, revenue projections, and cash flow requirements. A written and practical assessment evaluates their understanding of budgeting principles and their ability to apply the techniques covered during the course.

Organisational impact

More Effective Financial Planning

The programme strengthens the organisation's approach to preparing financial plans that reflect operational requirements and business priorities. Improved budget preparation supports more informed resource allocation, clearer expenditure expectations, and better coordination between asset-level plans and corporate financial objectives.

Improved Expenditure Visibility

Structured Oil and Gas Cost Control helps organisations compare planned expenditure with actual results and identify significant deviations. More consistent monitoring supports earlier investigation of overspending, improved cost accountability, and better evaluation of corrective measures.

Better Capital Allocation

A stronger understanding of investment appraisal supports the assessment of drilling programmes, field development projects, facilities, and infrastructure. Organisations gain a more consistent basis for comparing investment proposals, examining financial sensitivities, and evaluating the consequences of changes to project costs or schedules.

More Reliable Operating Budgets

Improved operating expenditure planning helps organisations account for production activities, maintenance, asset integrity, contractor services, logistics, and HSE requirements. A more comprehensive approach to cost estimation strengthens budget assumptions and supports better coordination between operational plans and available resources.

Stronger Forecasting and Planning

Oil and Gas Budget Forecasting enables financial and operational teams to reassess projections when production, pricing, schedules, or expenditure assumptions change. This supports more timely financial updates and helps management understand the consequences of emerging operating conditions.

Improved Joint Venture Financial Coordination

The programme develops understanding of partner budgeting responsibilities, expenditure approvals, cost recovery provisions, and financial submissions. This knowledge supports clearer communication between joint venture participants and strengthens the documentation of budget assumptions and expenditure changes.

Enhanced Performance Monitoring

Consolidated budgets, financial indicators, and periodic reviews provide a clearer picture of performance across assets and departments. These practices support consistent reporting, more effective variance investigation, and improved accountability for financial results.

Better Integration of Finance and Operations

By connecting cost information with production and project performance, the programme supports more effective cooperation between financial and technical teams. Organisations benefit from more informed discussions about maintenance priorities, contractor expenditure, production requirements, and project commitments.

Personal impact

Stronger Budget Preparation Skills

Participants develop a systematic understanding of the petroleum budgeting process, from initial cost estimation to financial consolidation. They learn to translate operating plans into financial requirements and prepare budgets supported by clear assumptions.

Improved Cost Analysis

The programme strengthens participants' ability to classify expenditure, assess cost drivers, compare estimates with actual results, and investigate financial deviations. These capabilities support more effective analysis of drilling expenditure, production costs, maintenance requirements, and contractor charges.

Greater Investment Evaluation Capability

Participants develop an understanding of capital budgeting techniques and their application to petroleum projects. They gain experience interpreting cash flow projections, net present value, internal rate of return, payback periods, and sensitivity analysis.

Better Financial Forecasting

Participants learn to evaluate how changing production volumes, oil prices, operating conditions, and project schedules influence financial projections. They develop a structured approach to reviewing assumptions and explaining the implications of revised forecasts.

Improved Cross-Functional Communication

The course strengthens participants' understanding of the relationship between financial decisions and operational activities. This supports more effective communication with engineers, production teams, procurement specialists, project managers, and senior management.

More Effective Management Reporting

Participants develop their ability to interpret budget performance, investigate variances, prepare financial summaries, and communicate expenditure trends. These skills support their contribution to planning meetings, performance reviews, and management decisions.

Broader Professional Capability

The programme provides relevant knowledge for professionals working in petroleum budgeting, cost control, project controls, financial planning, asset management, and operational finance. Participants strengthen their ability to contribute to complex financial planning activities across oil and gas businesses.

Who should attend

- Finance Managers and Financial Controllers: To strengthen financial planning, expenditure oversight, budget consolidation, and management reporting.
- Budget Analysts and Planning Specialists: To improve budget preparation, forecasting, cost estimation, and variance analysis.
- Cost Controllers and Project Controls Professionals: To develop stronger methods for tracking project expenditure, reviewing commitments, and investigating financial deviations.
- Petroleum Accountants: To improve their understanding of operational cost structures, budget information, expenditure classification, and cost recovery.
- Asset Managers and Asset Planning Specialists: To connect financial plans with production requirements, maintenance priorities, and investment decisions.
- Drilling and Well Operations Managers: To strengthen well cost estimates, expenditure authorisations, and drilling budget monitoring.

- Production and Operations Managers: To align operating budgets with production forecasts, facility requirements, and operational performance.
- Project Managers and Engineering Managers: To improve capital planning, project cost estimation, investment assessment, and expenditure control.
- Procurement and Supply Chain Professionals: To evaluate the financial implications of supplier pricing, service agreements, procurement commitments, and contractor costs.
- Joint Venture and Commercial Professionals: To strengthen their understanding of partner budgeting, expenditure approvals, cost allocation, and financial coordination.
- Performance Management and Reporting Specialists: To improve budget consolidation, performance measurement, and financial reporting.
- Senior Managers and Department Heads: To strengthen resource allocation, investment prioritisation, expenditure accountability, and financial oversight.

Course outline

Oil and Gas Budgeting Foundations

This module introduces the financial planning principles that underpin budgeting across the petroleum industry. Participants examine how the characteristics of upstream, midstream, and downstream operations influence expenditure requirements, with particular attention to reserves, field maturity, production profiles, and operational complexity.

The module also develops an understanding of budgeting methods and cost classification. Participants explore annual work programme and budget preparation, rolling financial plans, zero-based budgeting, and activity-based approaches. Practical analysis demonstrates how cost assumptions influence budget reliability and how weaknesses in planning contribute to expenditure overruns.

Capital Budgeting and Investment Evaluation

This module focuses on planning and evaluating capital expenditure across oil and gas projects. Participants examine financial requirements associated with exploration, appraisal, field development, drilling, production facilities, pipelines, and terminals. The module considers how project scope, cost estimates, and delivery schedules influence capital requirements.

Participants also explore investment appraisal and capital allocation techniques. They examine cash flow projections, net present value, internal rate of return, payback periods, and sensitivity analysis to understand the financial implications of competing investment proposals. Practical applications address well expenditure authorisation, project prioritisation, and the impact of delays on capital budgets.

Operating Costs and Production Expenditure Management

This module examines the preparation and management of operating expenditure budgets for petroleum assets. Participants consider the financial requirements of production operations, maintenance, asset integrity, logistics, marine and aviation services, contractor support, and health, safety, and environmental activities.

The module explores methods for estimating and monitoring operational costs. Participants examine historical expenditure, benchmarking, supplier pricing, production forecasts, and decline curve considerations. They also investigate the relationship between operating expenditure and production volumes, using cost performance analysis to identify deviations and assess opportunities for operational improvement.

Joint Venture Budgeting and Petroleum Fiscal Obligations

This module examines budgeting within joint venture arrangements and Production Sharing Contracts. Participants explore the responsibilities of operators and non-operators, preparation of expenditure submissions, approval procedures, and the financial information required to support planned activities.

The module also addresses cost recovery arrangements, recoverable and non-recoverable expenditure, regulatory submissions, local content requirements where applicable, and environmental and HSE budget provisions. Participants analyse how contractual terms and reporting responsibilities influence financial planning and examine approaches to resolving disagreements over budget deviations.

Integrated Financial Planning and Budget Performance

This module integrates the budgeting methods and financial management practices covered throughout the course. Participants examine how capital expenditure, operating expenditure, production assumptions, revenue projections, and cash flow requirements contribute to consolidated financial plans across petroleum assets.

The module also examines forecasting, scenario analysis, financial performance indicators, and periodic budget reviews. Participants assess how oil price changes, production downtime, drilling delays, and revised cost estimates affect financial outcomes. The module concludes with an integrated budgeting exercise and a final assessment covering the preparation, review, and evaluation of a hypothetical exploration and production asset budget.

Scheduled dates

Dates	Venue	Format	Fee
26 - 30 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,300
26 - 30 Oct 2026	Abuja, Nigeria	In person	£4,300
26 - 30 Oct 2026	Accra, Ghana	In person	£4,300
26 - 30 Oct 2026	Addis Ababa, Ethiopia	In person	£4,300
26 - 30 Oct 2026	Al Ain, United Arab Emirates	In person	£4,300
26 - 30 Oct 2026	Al Khobar, Saudi Arabia	In person	£4,300

Dates	Venue	Format	Fee

Certificate

Participants who complete the course receive a Certificate of Completion from Institute For Oil & Gas Training. The certificate confirms completion of the training programme and recognises participation in the prescribed learning activities.

Attendees must fulfil the attendance requirements established by Institute For Oil & Gas Training to qualify for the certificate. Participants are also expected to engage with the course activities and complete the applicable assessment requirements.
