

Cash Flow Reporting for JVs & PSCs Training Course

OGI-1202 · 5 days · 15 CPD hours · English

Overview

Cash Flow Reporting is a critical financial reporting capability for oil and gas organisations managing complex Joint Ventures and Production Sharing Contracts. The Cash Flow Reporting for JVs & PSCs Training Course from [Institute For Oil & Gas Training](#) develops practical expertise in preparing, analysing and presenting cash movements across joint operations, PSC structures, corporate entities and consolidated groups.

Oil and gas cash flows are shaped by operating agreements, ownership interests, entitlement mechanisms, partner funding arrangements, lifting structures, cost recovery provisions, tax payments, capital expenditure and intercompany transactions. These characteristics create reporting requirements that differ from straightforward corporate cash flow preparation. Finance professionals need to distinguish the economic substance of cash movements from the way transactions are recorded within individual entities, joint operations and consolidated financial statements.

This course addresses the practical skills gap between transaction-level cash management and reliable financial reporting. It focuses on the preparation and interpretation of cash flow information for JVs and PSCs, including gross versus net presentation, joint operation cash flows, entitlement based cash movements, foreign currency effects on cash and intra-group cash pooling presentation.

Participants develop a structured approach to linking general ledger activity, treasury transactions, partner funding, production entitlements and financial reporting requirements. The programme also examines consolidated cash flow preparation and elimination of intercompany flows so that reported cash movements reflect the appropriate reporting entity and accounting framework.

For oil and gas organisations, accurate cash flow reporting supports financial control, liquidity management, management reporting, partner communication and external financial reporting. Cash flow information also provides management with visibility over the movement of operating cash, investment expenditure, financing activity and changes in working capital across assets and legal entities.

The course addresses the practical distinction between cash generation and accounting profit. It examines how production receipts, operating expenditure, development expenditure, decommissioning expenditure, tax settlements, financing movements and partner contributions affect cash flow reporting. Participants also explore how cash movements are classified and presented when transactions involve several parties, currencies or reporting entities.

Cash Flow Reporting in Complex Oil and Gas Structures

JVs and PSCs create distinctive reporting challenges because cash does not always move in line with ownership percentages or reported revenue. A joint operation can involve direct payments by partners, operator-funded expenditure, cash calls, reimbursement mechanisms and settlement arrangements. PSCs can involve cost recovery, profit petroleum, entitlement calculations and government-related cash movements.

The course provides a practical framework for tracing these movements from source transactions to reported cash flow information. Participants learn to identify the underlying transaction, establish the relevant reporting entity, determine the nature of the cash movement and assess the appropriate presentation.

Gross Versus Net Presentation

Gross versus net presentation is particularly important when reporting cash movements involving operators, non-operating partners, subsidiaries and consolidated entities. The course examines the factors that influence whether cash movements are presented separately or reflected on a net basis within the applicable reporting structure.

Participants assess the relationship between contractual arrangements and financial reporting presentation. They learn to document the rationale supporting presentation decisions and distinguish cash flows that represent an entity's own transactions from movements processed on behalf of another party.

Joint Operation Cash Flows

Joint operation cash flows require clear reconciliation between the operator's transactions and each participant's economic interest. The course examines cash calls, partner contributions, operating expenditure, capital expenditure, recoveries and settlements.

Participants develop techniques for reconciling operator records with partner records and identifying differences caused by timing, allocation, settlement and reporting conventions. This supports stronger financial control and more transparent communication between joint venture partners.

Entitlement Based Cash Movements

Entitlement based cash movements are addressed within the context of production sharing arrangements and petroleum revenue flows. Participants examine how production entitlement, lifting arrangements, cash receipts and settlement mechanisms affect cash flow information.

The course separates physical production and entitlement concepts from actual cash movements, helping finance professionals avoid treating non-cash or allocation-based events as cash transactions. This distinction supports accurate reporting and stronger reconciliation between operational and financial data.

Foreign Currency Effects on Cash

International oil and gas operations frequently involve multiple currencies across production assets, corporate entities, bank accounts and partner transactions. The course examines foreign currency effects on cash, including the treatment and presentation of exchange movements within cash flow reporting.

Participants learn how currency movements influence reported cash balances and how foreign exchange effects are distinguished from operating, investing and financing cash flows. The approach strengthens reconciliation between opening cash, transaction flows, exchange movements and closing cash.

Intra-Group Cash Pooling Presentation

Intra-group cash pooling introduces additional complexity where central treasury functions manage cash for multiple subsidiaries or business units. The course considers how cash pooling arrangements affect cash flow presentation and

the distinction between entity-level movements and group-level cash movements.

Participants learn how to analyse transfers between group entities, central treasury accounts and operating subsidiaries. The course also examines the importance of identifying transactions that require elimination during consolidation.

Consolidated Cash Flow Preparation

Consolidated cash flow preparation requires more than combining individual entity cash flow statements. Intra-group receipts and payments, intercompany funding, internal dividends, group treasury movements and other internal cash flows require appropriate treatment.

The course develops practical techniques for preparing consolidated cash flow information while maintaining a clear audit trail from individual entities to the consolidated result. Participants examine how consolidation adjustments interact with cash flow classifications and reporting controls.

Elimination of Intercompany Flows

Elimination of intercompany flows is a central component of group cash flow preparation. Participants examine how internal transactions can distort consolidated cash flow information when entity-level reports are combined without appropriate elimination.

The course addresses intercompany loans, funding transfers, management charges, internal settlements and other group transactions. Participants develop reconciliation techniques that support accurate elimination and consistent documentation.

Institute For Oil & Gas Training positions these capabilities within a wider financial reporting environment, enabling participants to connect cash flow reporting with JV accounting, PSC accounting, treasury governance, consolidation and financial control.

Objectives

- Apply structured Cash Flow Reporting principles to JVs and PSCs
- Prepare cash flow information for complex oil and gas operating structures
- Distinguish operating, investing and financing cash flows appropriately
- Analyse gross versus net presentation requirements
- Assess joint operation cash flows and partner funding movements
- Reconcile operator and partner cash flow information
- Interpret entitlement based cash movements within PSC structures

- Identify the financial reporting implications of foreign currency effects on cash
- Present cash movements arising from intra-group cash pooling arrangements
- Prepare consolidated cash flow information from multiple entities
- Apply appropriate approaches to elimination of intercompany flows
- Reconcile opening cash, reported movements and closing cash balances
- Strengthen documentation supporting cash flow classifications
- Identify inconsistencies between treasury records and financial reporting schedules
- Improve coordination between JV accounting, treasury and financial reporting teams
- Develop practical controls for recurring cash flow reporting processes
- Support management reporting with clearer analysis of cash movements
- Strengthen the audit trail connecting source transactions to reported cash flows

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery model focused on applying cash flow reporting principles to realistic oil and gas finance situations. The methodology connects financial reporting concepts with transactions encountered in JVs, PSCs, operating companies and group treasury environments.

Case Studies

Participants work through oil and gas case studies involving joint operation expenditure, partner cash calls, production receipts, entitlement based cash movements, foreign currency transactions and intercompany funding. Each case is structured around a reporting issue that finance teams need to resolve using appropriate evidence and accounting logic.

Practical Reporting Exercises

Reporting exercises require participants to trace transactions from source records through cash flow classifications and reporting outputs. Exercises cover operating, investing and financing cash flows and include reconciliation between opening and closing cash balances.

JV and PSC Scenarios

Real-world JV and PSC scenarios demonstrate how contractual structures influence cash movements without replacing the requirements of applicable financial reporting standards. Participants assess operator and partner perspectives and identify differences between transaction processing and external reporting.

Consolidation Simulations

Consolidation simulations focus on combining entity-level information while identifying internal cash flows that require elimination. Participants practise analysing intra-group funding, treasury transfers and intercompany settlements before producing consolidated cash flow information.

Group Exercises

Group exercises replicate cross-functional finance discussions involving financial reporting, JV accounting, treasury and corporate finance personnel. Participants evaluate evidence, challenge classifications and document reporting decisions.

Real-World Reconciliation

The methodology emphasises reconciliation as a core control. Participants compare cash ledgers, bank information, JV statements, partner records and reporting schedules to identify timing differences, classification issues and unexplained movements.

Applied Analysis

Participants analyse the implications of gross versus net presentation, foreign currency effects on cash and intra-group cash pooling presentation through practical scenarios. This ensures the learning remains directly connected to operational reporting responsibilities.

Organisational impact

Institute For Oil & Gas Training enables sponsoring organisations to strengthen the quality and consistency of cash flow information generated across complex oil and gas structures.

Stronger Financial Control

A structured Cash Flow Reporting process gives finance teams clearer visibility over cash movements and improves the reconciliation between bank activity, accounting records, JV statements and financial reporting schedules.

Improved JV Governance

Accurate reporting of joint operation cash flows supports stronger governance between operators and partners. Clear reconciliation of cash calls, expenditure and settlements reduces uncertainty over reported movements and strengthens financial communication.

More Consistent PSC Reporting

PSC operations involve specialised entitlement and settlement mechanisms. Improved understanding of entitlement based cash movements helps organisations maintain clearer distinctions between production allocations, accounting

entries and actual cash transactions.

Better Consolidation Processes

Organisations with multiple subsidiaries and operating entities benefit from stronger consolidated cash flow preparation. Participants develop techniques for identifying internal cash movements and applying appropriate elimination of intercompany flows.

Improved Treasury and Finance Coordination

The course strengthens the connection between treasury activity and financial reporting. Finance teams gain a clearer understanding of how cash pooling, bank transfers, foreign currency transactions and funding movements affect reported cash.

Stronger Reporting Accuracy

Consistent classification and reconciliation reduce the risk of unexplained differences between cash balances and reported cash flow movements. This supports more reliable internal and external financial reporting processes.

Enhanced Management Visibility

Management receives more meaningful information when cash movements are correctly classified and reconciled. Clear reporting helps distinguish cash generated from operations, expenditure on assets and financing activity.

Better Cross-Functional Controls

The course promotes stronger coordination between financial reporting, JV accounting, treasury, tax, commercial finance and operational finance teams. This improves ownership of data and strengthens the overall reporting process.

Personal impact

Participants gain practical capabilities that support responsibilities across financial reporting, JV accounting, treasury and corporate finance.

Advanced Cash Flow Reporting Skills

Participants develop a deeper understanding of preparing and reviewing cash flow information within complex oil and gas environments.

Stronger JV Accounting Capability

Professionals gain practical skills for analysing operator and partner cash movements, including cash calls, expenditure, settlements and allocation differences.

Improved PSC Financial Understanding

Participants strengthen their ability to distinguish entitlement calculations from actual cash transactions and understand how PSC structures affect financial reporting.

Better Consolidation Expertise

Finance professionals develop practical techniques for preparing consolidated cash flow information and identifying internal movements requiring elimination.

Enhanced Reconciliation Skills

Participants learn systematic approaches to reconciling cash balances, bank transactions, entity-level reporting and group-level reporting.

Improved Foreign Currency Analysis

Professionals gain a clearer understanding of foreign currency effects on cash and their relationship with reported cash movements.

Career Capability

The skills developed through this course support professionals working in financial reporting, JV accounting, treasury, controllership, corporate finance and oil and gas accounting environments.

Better Reporting Judgement

Participants strengthen their ability to investigate unusual cash movements, assess presentation issues and document conclusions using relevant accounting requirements and transaction evidence.

Who should attend

Financial Reporting Managers

Designed for managers responsible for financial statements, cash flow reporting and reporting controls across oil and gas entities.

JV Accountants

Relevant for professionals preparing operator and partner accounting information, cash calls, settlements and joint operation reconciliations.

PSC Accountants

Suitable for finance professionals responsible for accounting and reporting within production sharing arrangements and entitlement structures.

Treasury Managers

Supports treasury professionals who need to understand how funding, cash pooling, foreign currency transactions and bank movements flow into financial reporting.

Financial Controllers

Provides controllers with practical techniques for reviewing classifications, reconciliations, consolidation adjustments and reporting controls.

Group Accountants

Useful for professionals preparing consolidated financial information across subsidiaries, joint operations and corporate entities.

Finance Managers

Supports managers overseeing finance operations where JV, PSC, treasury and financial reporting responsibilities intersect.

Corporate Finance Professionals

Relevant for professionals analysing group cash movements, funding structures and liquidity information for management reporting.

Oil and Gas Accounting Specialists

Designed for accounting specialists working with upstream transactions, partner accounting and complex petroleum financial structures.

Senior Finance Professionals

Suitable for experienced professionals who require advanced practical understanding of cash flow reporting across multiple reporting entities.

Course outline

Cash Flow Reporting Foundations for JVs and PSCs

This module establishes the core framework for Cash Flow Reporting in oil and gas organisations. It examines the relationship between accounting records, treasury transactions, JV structures, PSC arrangements and financial statement cash flow information.

JV Cash Flows and Gross Versus Net Presentation

This module focuses on joint operation cash movements and the reporting challenges created by operator and partner arrangements. It examines how cash transactions are recorded, allocated and presented across different reporting perspectives.

PSC Entitlements and Foreign Currency Cash Movements

This module examines cash reporting within production sharing environments and addresses entitlement based cash movements alongside foreign currency effects on cash. The focus is on separating contractual and allocation concepts from actual cash transactions.

Consolidated Cash Flow Preparation and Intra-Group Cash Pooling

This module addresses cash flow reporting at group level. It examines how individual entity cash flows are brought together and how intra-group cash pooling arrangements influence the presentation and reconciliation of consolidated cash information.

Elimination of Intercompany Flows and Reporting Controls

This module integrates the course concepts into a structured control and reporting process. It focuses on elimination of intercompany flows, reconciliation, review procedures and the preparation of reliable final cash flow information for management and financial reporting.

Scheduled dates

Dates	Venue	Format	Fee
12 - 16 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,000
12 - 16 Oct 2026	Abuja, Nigeria	In person	£4,000
12 - 16 Oct 2026	Accra, Ghana	In person	£4,000
12 - 16 Oct 2026	Addis Ababa, Ethiopia	In person	£4,000
12 - 16 Oct 2026	Al Ain, United Arab Emirates	In person	£4,000
12 - 16 Oct 2026	Al Khobar, Saudi Arabia	In person	£4,000
12 - 16 Oct 2026	Alberta, Canada	In person	£4,000
