

Consolidation & JV Structures for Petroleum Group Entities Training Course

OGI-1217 · 5 days · 15 CPD hours · English

Overview

Consolidation & JV Structures is a critical petroleum accounting capability for organisations managing complex ownership arrangements, subsidiaries, joint operations, joint ventures and group reporting across oil and gas assets. [The Institute For Oil & Gas Training](#) delivers this course to strengthen practical decision-making around IFRS 11 joint arrangements, control assessment, consolidation and financial reporting for petroleum group entities.

Oil and gas groups operate through layered legal and commercial structures involving parent companies, subsidiaries, joint operations, joint ventures, associates and contractual arrangements. Each structure creates distinct accounting and reporting requirements. Finance leaders and petroleum accounting professionals must determine the appropriate accounting treatment, establish the reporting relationship between entities and ensure that group financial information reflects the underlying economic substance of the arrangement.

The course addresses the operational gap between corporate structure and accounting treatment. A technically correct legal structure does not automatically determine the accounting outcome. Professionals need to assess control, rights and obligations, contractual terms, decision-making arrangements and exposure to variable returns before establishing the appropriate reporting approach.

The course provides a practical framework for analysing Consolidation & JV Structures within petroleum groups. It examines the distinction between a joint operation versus joint venture, the application of proportionate recognition where relevant to the underlying rights and obligations, and the use of the equity method for investments accounted for as joint ventures or associates. It also addresses group reporting package requirements, intercompany elimination, minority interest and the preparation of reliable consolidated financial information.

The oil and gas sector requires particularly strong judgement because upstream projects frequently involve multiple partners, non-operating interests, joint operating arrangements, production sharing structures and investment entities. Accounting teams must translate these arrangements into consistent reporting processes while maintaining clear documentation and effective communication between corporate finance, asset accounting, joint venture accounting and operational teams.

Institute For Oil & Gas Training positions this course around real corporate reporting requirements rather than theoretical accounting discussion. Participants work through practical scenarios involving ownership changes, control assessments, joint arrangements, consolidation adjustments and reporting challenges that arise across petroleum group entities.

The programme is designed for professionals who need to connect transaction-level accounting with group-level financial reporting. It strengthens the ability to identify the correct accounting model, interpret contractual rights, challenge inappropriate classifications and support accurate reporting decisions.

The course also addresses the relationship between entity-level records and group reporting. Consolidation depends on timely and consistent information from subsidiaries, joint ventures and other reporting entities. Professionals therefore need a structured approach to reporting packages, accounting policies, intercompany balances, transactions, eliminations and non-controlling interests.

By developing these capabilities, organisations establish stronger financial control over complex petroleum structures. Participants gain a practical understanding of how ownership arrangements affect accounting treatment and how reporting teams coordinate information across multiple entities and jurisdictions.

Objectives

- Understand the structure and accounting implications of complex petroleum group entities and ownership arrangements.
- Apply IFRS 11 joint arrangements principles to relevant oil and gas structures.
- Distinguish between a joint operation versus joint venture using contractual rights and obligations.
- Perform structured control assessment for subsidiaries and other investee entities.
- Determine the appropriate consolidation approach for controlled entities.
- Understand the application of proportionate recognition where the underlying arrangement requires recognition of rights to assets and obligations for liabilities.
- Apply the equity method to relevant joint ventures and associates.
- Identify the information required from subsidiaries and investee entities for group reporting.
- Strengthen group reporting package preparation and review processes.
- Identify and resolve intercompany balances and transactions before consolidated reporting.
- Understand the treatment and presentation of minority interest within consolidated financial statements.
- Evaluate changes in ownership interests and their impact on group reporting.
- Improve communication between petroleum accounting, corporate finance and joint venture teams.
- Strengthen documentation of accounting judgements and reporting decisions.

- Improve the consistency, accuracy and auditability of consolidated petroleum financial information.

Training methodology

Institute For Oil & Gas Training uses a corporate-focused methodology built around practical petroleum accounting situations. The delivery combines technical explanation with case studies, structured analysis, group exercises, reporting simulations and real-world scenarios based on the types of ownership structures encountered by oil and gas companies.

Participants analyse entity structures and determine the appropriate accounting treatment based on control, rights, obligations and contractual arrangements. This approach develops the judgement required when an organisational chart alone does not provide sufficient evidence for determining the accounting model.

Case studies focus on realistic group reporting challenges, including subsidiary consolidation, joint arrangements, changes in ownership interests, intercompany transactions and reporting differences between corporate and asset-level accounting. Participants assess the relevant information, identify the accounting issue and develop a defensible reporting response.

Group exercises examine joint operation versus joint venture classifications and the practical consequences of each classification. Participants consider how contractual rights and obligations influence recognition and presentation, then compare the reporting implications across different petroleum arrangements.

Consolidation simulations provide practical experience with group reporting package requirements, intercompany elimination and minority interest calculations. Participants work through the flow of financial information from individual entities into consolidated group reporting.

Real-world scenarios also address situations involving changes in ownership, new investments, restructuring and changes in control. These exercises reinforce the need to reassess accounting treatment when the underlying arrangement changes.

The methodology encourages participants to challenge assumptions, document accounting judgements and communicate conclusions clearly to finance leadership, auditors, joint venture partners and operational stakeholders. This makes the learning directly applicable to professional responsibilities in petroleum accounting and group finance.

Organisational impact

The course strengthens the organisation's ability to manage financial reporting across complex petroleum group structures. Accurate classification of subsidiaries, joint operations and joint ventures establishes a stronger foundation for group reporting and financial control.

A clear approach to control assessment reduces inconsistent accounting conclusions between business units. Finance teams gain a structured basis for evaluating ownership arrangements, contractual rights, governance mechanisms and reporting responsibilities.

Improved understanding of IFRS 11 joint arrangements supports more consistent treatment of joint operations and joint ventures. This is particularly important where oil and gas projects involve multiple participants with different economic rights and obligations.

The course also strengthens group reporting package processes. Standardised information requirements help corporate finance teams obtain appropriate financial data from subsidiaries, joint ventures and other reporting entities. This supports more efficient consolidation and reduces avoidable reporting discrepancies.

Stronger intercompany elimination procedures improve the integrity of consolidated results. Finance teams develop greater awareness of intercompany balances, transactions and unrealised effects that require appropriate treatment during consolidation.

Understanding minority interest improves the quality of consolidated reporting where ownership is less than 100 percent. Finance professionals gain a clearer understanding of how non-controlling interests interact with group financial statements and ownership changes.

The programme also supports better collaboration between corporate accounting and operational finance teams. Clearer communication around reporting requirements reduces misunderstandings between asset-level teams, joint venture accountants and group reporting functions.

From a governance perspective, stronger documentation of accounting judgements provides management with a clearer audit trail. Teams can explain how they reached conclusions regarding control, classification, consolidation and equity accounting.

The overall organisational benefit is a more disciplined approach to financial reporting across complex petroleum structures. This supports improved reporting consistency, stronger financial control and more efficient coordination between group entities.

Personal impact

Participants develop practical expertise in analysing petroleum ownership and reporting structures. They strengthen their ability to interpret complex entity relationships and translate contractual arrangements into appropriate accounting conclusions.

Professionals gain greater confidence in performing control assessment and distinguishing controlled entities from joint arrangements and other investments. This strengthens their contribution to corporate accounting decisions and reporting reviews.

The course improves practical understanding of the joint operation versus joint venture distinction. Participants learn how the classification affects recognition, measurement and reporting responsibilities.

Participants also strengthen their understanding of proportionate recognition and the equity method, enabling them to assess the appropriate reporting approach for different investment structures.

Practical exercises develop competence in preparing and reviewing group reporting package information. Participants learn how entity-level information feeds into group consolidation and where reporting inconsistencies commonly arise.

The programme strengthens technical capability in intercompany elimination and minority interest reporting. These skills support professionals responsible for preparing, reviewing or challenging consolidated financial information.

Participants also develop stronger professional judgement. Rather than relying solely on ownership percentages or legal entity charts, they learn to consider contractual rights, obligations, governance arrangements and control indicators.

For finance managers and senior accountants, these capabilities strengthen oversight of reporting teams and improve the ability to challenge accounting conclusions. For petroleum accountants and joint venture professionals, the course provides a stronger understanding of how asset-level accounting connects with corporate reporting.

The resulting capability supports career development across petroleum accounting, group reporting, financial control, joint venture accounting, corporate finance and upstream finance leadership.

Who should attend

- Petroleum Accountants — To strengthen accounting treatment for complex ownership structures and petroleum group entities.
- Joint Venture Accountants — To improve classification, reporting and reconciliation of joint arrangements.
- Group Financial Reporting Managers — To strengthen consolidation processes and group reporting controls.
- Financial Controllers — To improve oversight of consolidation, control assessment and reporting quality.
- Corporate Accountants — To develop practical capability in subsidiary and investment accounting.
- Finance Managers — To strengthen decision-making around group structures and financial reporting.
- Upstream Finance Professionals — To connect operational petroleum arrangements with corporate accounting requirements.
- Financial Reporting Specialists — To improve application of consolidation and equity accounting principles.
- Joint Venture Managers — To understand the financial reporting implications of petroleum ownership structures.
- Internal Audit Professionals — To strengthen review of consolidation controls, reporting processes and accounting judgements.
- Finance Directors and Senior Finance Leaders — To improve strategic oversight of complex group reporting structures.

- Professionals involved in Group Close and Consolidation — To improve reporting package management, elimination processes and consolidated reporting accuracy.

Course outline

Petroleum Group Structures and Accounting Foundations

This module establishes the framework for understanding how petroleum group structures influence financial reporting. It examines subsidiaries, investments, joint arrangements and other entity relationships within oil and gas organisations. Participants analyse the connection between legal ownership, contractual rights, governance arrangements and accounting treatment.

Joint Arrangements and Petroleum Interests

This module focuses on the accounting treatment of joint arrangements in the oil and gas sector. Participants examine the distinction between joint operations and joint ventures and evaluate how contractual terms determine the nature of the accounting relationship.

Consolidation, Equity Accounting and Ownership Interests

This module examines the practical mechanics of accounting for subsidiaries, joint ventures and relevant investments within petroleum groups. Participants compare full consolidation, proportionate recognition where applicable to the underlying rights and obligations, and the equity method.

Group Reporting Packages and Consolidation Adjustments

This module focuses on the operational process of bringing entity-level financial information into consolidated group reporting. Participants examine reporting packages, accounting policy alignment, intercompany elimination and reconciliation procedures.

Integrated Petroleum Group Reporting and Practical Application

This module integrates the course concepts through comprehensive petroleum group reporting scenarios. Participants apply control assessment, joint arrangement classification, consolidation, equity accounting, intercompany elimination and minority interest principles within connected case studies.

Scheduled dates

Dates	Venue	Format	Fee
12 - 16 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,300
12 - 16 Oct 2026	Abuja, Nigeria	In person	£4,300
12 - 16 Oct 2026	Accra, Ghana	In person	£4,300

Certificate

Attendees who successfully complete the course receive a Certificate of Completion from Institute For Oil & Gas Training.

The certificate is issued upon completion of the full course and fulfilment of the attendance requirement. Participants are expected to attend the scheduled course sessions and actively engage with the programme activities.
