

Cost Recovery Accounting Under PSCs & Concessions

Training Course

OGI-1210 · 5 days · 15 CPD hours · English

Overview

Cost Recovery Accounting is a critical discipline for organisations operating under Production Sharing Contracts and concession arrangements where recoverable expenditure, contractual limits, entitlement mechanisms and financial reporting requirements directly influence project economics. The Cost Recovery Accounting Under PSCs & Concessions Training Course from Institute For Oil & Gas Training develops practical capability in controlling, classifying, documenting and reporting petroleum costs within contractual recovery structures.

Oil and gas projects operate through complex financial arrangements in which expenditure does not automatically qualify for recovery from production revenues. Contractual provisions define the recoverable cost pool, cost recovery limit, eligibility criteria, accounting procedure compliance and supporting documentation required before costs enter the recovery mechanism. Finance, accounting, commercial and joint venture teams therefore require a disciplined understanding of how expenditure moves from initial recording through classification, recovery schedules, contractor cost statements and final reconciliation.

This course addresses the operational gap between conventional financial accounting and petroleum accounting under PSCs and concessions. Standard accounting records provide the financial foundation, while the contract determines whether a particular cost is recoverable, how it is allocated, when it enters the recoverable cost pool and how it affects contractor entitlement.

[Institute For Oil & Gas Training](#) focuses on the practical relationship between contractual provisions and accounting execution. Participants examine cost classification for recovery, cost recovery limits, unrecovered cost balance management, recovery calculations, cost statement preparation and audit support. The approach connects accounting entries with commercial consequences so that professionals understand how accounting decisions influence contractor recovery and petroleum entitlement.

The course also addresses the importance of maintaining transparent audit trails. Recoverable costs must be supported by appropriate documentation, allocated consistently and reported in accordance with the applicable PSC or concession agreement. Errors in classification, timing, allocation or documentation create disputes between contractors, operators, partners and host government representatives. Strong Cost Recovery Accounting controls therefore support financial accuracy, contractual compliance and efficient audit resolution.

A key focus is the distinction between recoverable and non-recoverable expenditure. Participants work with practical examples involving operating expenditure, development expenditure, exploration expenditure, overheads, shared costs, technical services, procurement costs and other project-related expenditure. The course examines how eligibility criteria affect treatment and how contractual provisions take precedence when determining recovery.

Recovery schedules provide another important area of focus. Participants learn how recoverable expenditure interacts with production volumes, revenues, recovery ceilings and unrecovered cost balances. This provides a stronger

understanding of how cost recovery affects contractor take, government take and project cash flows.

Contractor cost statements also receive detailed attention. Participants examine how cost information is structured, reconciled and presented to support review by partners, auditors and government authorities. The emphasis remains on practical accounting control, documentation quality and consistency between underlying ledgers, contractual calculations and reported statements.

For organisations, the value of this capability extends beyond accounting accuracy. Effective cost recovery processes strengthen contractual governance, improve financial visibility and reduce avoidable disputes. For professionals, the course builds a commercially relevant petroleum accounting capability that connects financial records with PSC economics and contractual entitlement.

Institute For Oil & Gas Training delivers this course for professionals who need to manage or review petroleum costs under contractual fiscal arrangements. The programme is suitable for finance, accounting, commercial, joint venture, audit, tax, cost control and petroleum economics professionals working across upstream oil and gas operations.

Objectives

- Explain the accounting principles and contractual mechanisms governing cost recovery under PSCs and concessions
- Interpret contractual provisions affecting recoverable expenditure and contractor entitlement
- Identify the eligibility criteria applicable to recoverable and non-recoverable costs
- Establish and maintain an appropriate recoverable cost pool
- Apply cost classification for recovery across major upstream expenditure categories
- Assess expenditure against contractual cost recovery limits
- Calculate and monitor unrecovered cost balances
- Prepare and review recovery schedules
- Evaluate contractor cost statements for completeness, accuracy and contractual compliance
- Strengthen accounting procedure compliance across petroleum accounting processes
- Reconcile cost recovery calculations with underlying accounting records
- Identify unsupported, incorrectly classified or potentially non-recoverable expenditure

- Improve documentation and audit trails for recoverable costs
- Understand the relationship between cost recovery, contractor entitlement and project economics
- Strengthen communication between finance, commercial, joint venture and operational teams
- Support effective responses to cost recovery reviews and audits
- Improve internal controls over petroleum cost reporting and recovery processes

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery model designed around the financial and contractual realities of upstream oil and gas operations. The course combines technical explanation with case studies, accounting scenarios, recovery calculations, group exercises, document reviews and simulated contractor cost statement assessments.

Participants work through representative PSC and concession scenarios covering the complete cost recovery cycle. The exercises begin with expenditure identification and classification before progressing through eligibility testing, recovery schedules, cost recovery limits, unrecovered cost balances and contractor reporting.

Case studies are used to demonstrate how contractual wording affects accounting treatment. Participants assess expenditure against defined eligibility criteria and determine whether costs should enter the recoverable cost pool. This reinforces the distinction between financial accounting treatment and contractual recovery treatment.

Simulation exercises focus on the preparation and review of contractor cost statements. Participants work with cost categories, supporting documentation and reconciliation requirements to identify inconsistencies and control weaknesses.

Group exercises examine common areas of disagreement between contractors, partners and government representatives. These include cost allocation, overhead recovery, shared services, timing differences, unsupported expenditure and treatment of costs outside the contractual recovery provisions.

Recovery calculation exercises demonstrate the relationship between recoverable expenditure, production revenues, contractual limits and unrecovered cost balances. Participants assess how changes in recoverable expenditure and recovery ceilings affect subsequent recovery periods.

Real-world scenarios are used to strengthen decision-making. Participants review situations involving disputed costs, incomplete documentation, incorrect classifications and reconciliation differences. The methodology encourages participants to approach each issue from accounting, contractual, commercial and audit perspectives.

The course also incorporates structured discussions around internal controls and accounting procedure compliance. Participants identify control points that support accurate cost capture, classification, approval, reporting and reconciliation.

Organisational impact

The course strengthens organisational control over one of the most commercially sensitive areas of upstream petroleum accounting. A structured Cost Recovery Accounting process enables companies to distinguish contractual recovery from conventional financial reporting and establish clearer controls around recoverable expenditure.

Improved cost classification for recovery supports more consistent treatment of expenditure across projects, assets and accounting periods. Finance teams gain a clearer framework for identifying costs that satisfy contractual eligibility criteria and separating them from expenditure requiring different treatment.

Better management of the recoverable cost pool improves financial visibility. Organisations gain stronger control over the accumulation, utilisation and reconciliation of recoverable expenditure, supporting more reliable reporting to partners and host government representatives.

Improved recovery schedules provide clearer visibility of the relationship between expenditure, production revenues, contractual recovery limits and unrecovered cost balances. This supports more effective project financial monitoring and commercial decision-making.

The course also strengthens contractor cost statement quality. Consistent preparation and reconciliation reduce discrepancies between general ledger records, supporting schedules and contractual reporting. This improves the efficiency of reviews and provides stronger documentation for audit processes.

Enhanced accounting procedure compliance reduces operational exposure created by inconsistent cost treatment. Defined procedures help organisations establish clear responsibilities for cost capture, review, approval, classification and reporting.

The course also supports stronger cross-functional coordination. Finance, commercial, procurement, joint venture, tax and operational teams gain a shared understanding of the contractual consequences of expenditure decisions.

For organisations managing multiple PSCs or concessions, the methodology supports stronger governance across different contractual environments. Teams can apply a disciplined review process while recognising that each agreement contains specific provisions governing recoverability.

Better audit readiness is another important organisational outcome. Clear documentation, reconciliation processes and recovery schedules provide an organised evidence trail for internal and external review.

The result is stronger financial control, clearer contractual reporting, improved recovery governance and more efficient management of petroleum accounting processes.

Personal impact

Participants develop a practical understanding of how petroleum accounting interacts with PSC and concession economics. Rather than treating accounting as an isolated reporting function, they learn to evaluate expenditure through financial, contractual and commercial perspectives.

Professionals strengthen their ability to determine whether expenditure satisfies defined eligibility criteria and whether it should enter the recoverable cost pool. This improves judgement when reviewing complex project

expenditure.

Participants also build practical capability in cost classification for recovery. They learn to assess different expenditure categories, identify appropriate treatment and recognise circumstances requiring additional contractual review.

The course develops stronger skills in preparing and analysing recovery schedules. Participants gain greater confidence in following unrecovered cost balances and understanding how recovery limits influence subsequent reporting periods.

Contractor cost statement preparation and review skills are strengthened through practical exercises. Participants learn to identify inconsistencies between reported costs, accounting records and supporting documentation.

The course also develops audit and compliance capability. Professionals learn how to create stronger audit trails, identify documentation gaps and investigate cost recovery discrepancies.

Commercial awareness improves because participants understand how accounting treatment affects contractor recovery and project economics. This supports more informed communication with commercial managers, joint venture partners and operational teams.

The training also enhances career capability for professionals working in petroleum accounting, financial control, joint venture accounting, cost control and upstream commercial functions. The knowledge is directly relevant to roles that require interaction with PSC accounting and contractual cost recovery processes.

Who should attend

- Petroleum Accountants — Strengthen technical capability in PSC cost recovery, cost classification and contractor reporting.
- Joint Venture Accountants — Improve management of partner costs, recovery calculations, reconciliations and contractual reporting.
- Cost Control Professionals — Strengthen control over expenditure classification, eligibility and recoverable cost tracking.
- Financial Controllers — Improve governance over petroleum accounting procedures, reporting and recovery controls.
- Finance Managers — Develop stronger oversight of contractual cost recovery and financial reporting processes.
- Commercial Managers — Understand the financial consequences of PSC recovery provisions and expenditure treatment.
- Joint Venture Managers — Improve review of partner reporting, cost statements and recovery positions.

- Upstream Finance Professionals — Connect accounting records with production sharing and concession economics.
- Internal Auditors — Strengthen the review of cost recovery controls, documentation and contractual compliance.
- External Auditors — Improve understanding of petroleum cost recovery structures and supporting evidence.
- Tax Professionals — Understand the relationship between recoverable expenditure, contractual treatment and petroleum project reporting.
- Petroleum Economists — Strengthen understanding of how cost recovery mechanisms influence project economics and contractor entitlement.
- Senior Finance Professionals — Enhance strategic oversight of PSC accounting governance and recovery performance.
- Accounting and Finance Team Leaders — Improve internal procedures, review standards and team capability across petroleum accounting activities.

Course outline

PSC Cost Recovery Principles and Contractual Architecture

This module establishes the foundation for understanding Cost Recovery Accounting under PSCs and concessions. It examines how contractual fiscal provisions determine recoverable expenditure, contractor obligations and the relationship between accounting records and entitlement calculations.

Cost Classification and Recoverable Expenditure

This module focuses on the practical classification of expenditure and the controls required to determine whether costs qualify for recovery. Participants examine how accounting teams evaluate costs against contractual requirements and supporting documentation.

Recovery Limits, Schedules and Unrecovered Balances

This module examines the mechanics of recovery calculations and the relationship between expenditure, production revenues, contractual recovery limits and outstanding balances. Participants work with recovery schedules and practical calculation scenarios.

Contractor Cost Statements and Joint Venture Reporting

This module develops practical capability in preparing, reviewing and reconciling contractor cost statements. It focuses on reporting integrity, partner review, joint venture accounting processes and supporting documentation.

Compliance, Audit Readiness and Recovery Governance

This module brings the course together through a practical review of controls, compliance and audit readiness. Participants examine how organisations protect the integrity of recovery calculations through governance, documentation and systematic review.

Scheduled dates

Dates	Venue	Format	Fee
12 - 16 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,200
12 - 16 Oct 2026	Abuja, Nigeria	In person	£4,200
12 - 16 Oct 2026	Accra, Ghana	In person	£4,200
12 - 16 Oct 2026	Addis Ababa, Ethiopia	In person	£4,200
12 - 16 Oct 2026	Al Ain, United Arab Emirates	In person	£4,200

Certificate

Attendees receive a Certificate of Completion from Institute For Oil & Gas Training upon finishing the course.

The Certificate of Completion is issued to participants who satisfy the course attendance requirement and complete the scheduled programme. Attendance throughout the course supports successful completion and confirms participation in the full training programme.
