Financial Modelling for PSCs & JVs: Cash Calls Training Course

OGI-1171 · 5 days · 15 CPD hours · English

Overview

Financial Modelling for PSCs & JVs is a specialised corporate training course from Institute For Oil & Gas Training designed for finance, commercial, accounting and joint venture professionals responsible for partner economics, cash requirements and financial decision-making across oil and gas assets. The programme develops practical capability in financial modelling for PSCs and JVs, with particular emphasis on participating interest modelling, partner share allocation, cash call forecasting and partner net cash flow analysis.

Joint ventures and production sharing contracts create financial structures that require disciplined modelling of participating interests, expenditure obligations, production entitlements, revenue allocation, cost recovery, taxation, carried interest arrangements and partner funding requirements. A change in participating interest, a revised development plan, a farm-in transaction, an equity redetermination or a unitisation decision can materially change the cash requirements and economic position of each participant. Finance and commercial teams therefore require models that connect contractual interests with operational assumptions and partner-level cash movements.

Institute For Oil & Gas Training delivers this course for organisations that need stronger control over joint venture financial planning and cash call processes. The programme focuses on building models that support transparent partner share allocation, reliable cash call forecasting and clear analysis of partner net cash flow. Participants examine the financial consequences of changing ownership structures and develop structured approaches to modelling carried interest, farm-in and farm-out transactions, equity redetermination and unitisation.

The course addresses a common operational challenge in oil and gas organisations: financial models often contain multiple assumptions that interact across production, expenditure, ownership and entitlement structures. A small change in participating interest can affect capital contributions, operating cost allocations, revenue entitlement and partner cash flow. Effective financial modelling therefore requires more than spreadsheet construction. It requires a clear understanding of contractual economics, accounting treatment, funding obligations and the relationship between asset-level and partner-level financial outcomes.

The programme integrates PSC and JV economics with practical modelling techniques. Participants work through scenarios involving development expenditure, operating costs, production profiles, partner ownership, cash calls and changes in equity. The modelling approach provides a structured way to trace assumptions from source data through allocation calculations and ultimately into partner financial positions.

Cash calls represent a critical interface between joint venture operations and partner finance functions. Accurate cash call forecasting supports treasury planning, funding readiness and partner communication. The course therefore examines how expected expenditure is translated into partner funding requirements, how changes in expenditure forecasts affect future cash calls and how actual versus forecast funding positions can be assessed.

Participating interest modelling is another central component. Participants examine how ownership percentages drive cost allocation, revenue entitlement and partner cash flow. The course also addresses situations where participating interests change through farm-in and farm-out arrangements, equity redetermination or unitisation. These situations require models that preserve calculation integrity while clearly identifying the financial consequences for each participant.

Carried interest arrangements introduce additional complexity because the party funding another participant's share requires a model that distinguishes economic ownership from immediate funding responsibility. The course provides a practical framework for representing these arrangements and tracing their effect on partner cash flows.

The programme also strengthens financial communication between finance, commercial, asset management, treasury and joint venture teams. A well-structured model provides a common financial reference point for evaluating funding requirements, reviewing partner positions and supporting commercial decisions. Institute For Oil & Gas Training focuses on models that are transparent, controlled and suitable for corporate decision-making rather than models that simply produce numerical outputs.

Objectives

- Develop practical financial modelling capability for PSC and JV structures
- Understand the financial mechanics behind participating interest modelling
- Build structured approaches to partner share allocation
- Improve cash call forecasting and partner funding analysis
- Model partner net cash flow across different ownership structures
- Analyse carried interest arrangements and their funding implications
- Apply farm-in and farm-out modelling techniques to ownership changes
- Assess the financial consequences of equity redetermination
- Develop practical unitisation modelling approaches
- Connect production, expenditure and ownership assumptions within integrated financial models
- Analyse the effect of capital and operating expenditure on partner funding requirements
- Improve transparency and consistency in partner financial calculations

- Strengthen communication between finance, treasury, commercial and JV teams
- Support more reliable financial planning for jointly operated assets
- Improve the interpretation of model outputs for corporate decision-making
- Identify key assumptions and dependencies within PSC and JV financial models
- Establish stronger controls around partner allocation and cash call calculations

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery approach throughout the programme. The training combines technical explanation with realistic oil and gas financial scenarios so that participants understand how PSC and JV financial models operate within actual business processes.

Case studies form a major part of the delivery. Participants examine hypothetical upstream assets involving multiple partners, different participating interests, development expenditure, operating costs and production assumptions. These cases provide a structured environment for analysing partner share allocation and cash call requirements.

Financial modelling exercises focus on the relationship between assumptions and outputs. Participants work through ownership changes, expenditure movements, production variations and funding requirements to understand how individual model inputs affect partner-level financial positions.

Scenario-based simulations are used to examine commercial events such as farm-ins, farm-outs, carried interest arrangements, equity redetermination and unitisation. Participants assess how these events affect participating interests, partner obligations and partner net cash flow.

Group exercises strengthen cross-functional understanding. Finance professionals, commercial specialists and JV personnel can examine the same scenario from different operational perspectives, helping organisations establish a common understanding of partner economics and cash requirements.

Model review exercises are also incorporated into the delivery approach. Participants assess model structures, assumptions, allocation mechanisms and outputs to identify inconsistencies and improve transparency. The emphasis is on disciplined modelling logic, traceability and practical usability.

The methodology reflects the working environment of oil and gas organisations. Instead of focusing solely on theoretical financial modelling principles, Institute For Oil & Gas Training connects modelling techniques with asset economics, partner obligations, funding requirements and commercial decisions.

Organisational impact

Financial modelling capability directly supports stronger financial control across jointly owned oil and gas assets. Institute For Oil & Gas Training helps organisations establish more disciplined approaches to ownership allocation,

expenditure forecasting and partner funding analysis.

Improved cash call forecasting gives finance and treasury teams a clearer view of expected funding requirements. Forecast expenditure can be translated into partner-level obligations using defined participating interests and contractual allocation principles. This supports better preparation for upcoming funding requirements and improves communication between asset teams and corporate finance functions.

Stronger partner share allocation improves consistency across financial reporting and JV processes. When ownership percentages, cost allocations and revenue entitlements are modelled systematically, organisations gain greater visibility over how asset-level activity affects each participant.

The course also supports improved control over ownership changes. Farm-in and farm-out transactions can introduce changes to participating interests and funding responsibilities. Structured modelling provides a clear method for evaluating the financial effect of those transactions and maintaining consistency between ownership assumptions and partner cash flows.

Equity redetermination can similarly affect partner obligations and economic positions. A disciplined model helps organisations assess the financial consequences of revised interests and identify changes in future funding requirements.

Unitisation creates another important modelling requirement because multiple interests or fields can become subject to a revised ownership and allocation structure. Unitisation modelling provides a framework for analysing how revised participation affects costs, production entitlement and partner net cash flow.

Carried interest arrangements require clear separation between economic ownership and funding responsibilities. Better modelling helps finance and commercial teams identify who bears expenditure, how funding obligations are represented and how the arrangement affects partner-level financial positions.

The programme also strengthens model transparency. A model that clearly separates assumptions, calculations, allocations and outputs is easier for finance, commercial and JV teams to review. This supports stronger internal controls and more efficient review processes.

The organisational benefit extends beyond spreadsheet quality. Better financial models provide a stronger basis for budgeting, treasury planning, partner discussions, investment analysis and management reporting. The result is a more structured connection between operational forecasts and financial consequences.

Personal impact

Participants develop practical capability in financial modelling for PSCs and JVs that directly supports their responsibilities within oil and gas organisations. They gain a stronger understanding of how ownership, expenditure, production and contractual arrangements interact within partner financial models.

Finance professionals strengthen their ability to translate asset-level assumptions into partner-level financial outcomes. This supports more effective analysis of cash calls, funding requirements and partner net cash flow.

JV professionals gain stronger modelling skills for reviewing participating interests, expenditure allocations and partner obligations. This improves their ability to challenge assumptions, interpret model outputs and communicate

financial implications.

Commercial professionals develop a clearer understanding of the financial consequences of farm-in and farm-out transactions, equity redetermination, carried interest and unitisation.

Treasury professionals gain a stronger framework for understanding how forecast expenditure translates into partner funding requirements. This supports improved coordination between asset forecasts and corporate liquidity planning.

Accounting professionals strengthen their understanding of the financial structures surrounding jointly controlled operations and ownership arrangements. This provides useful context for analysing model outputs and their relationship with financial reporting requirements.

Participants also develop stronger model review skills. They learn to assess assumptions, allocation logic, ownership changes and cash flow outputs rather than relying solely on headline results.

The course supports career development by building a specialised capability relevant to upstream finance, joint venture management, commercial analysis, petroleum accounting and energy investment functions. Participants leave with a more integrated understanding of the financial relationships that govern jointly owned oil and gas assets.

Who should attend

Joint Venture Finance Professionals

Designed for professionals responsible for partner accounting, expenditure allocation, cash calls, partner reporting and financial analysis across jointly operated assets.

Petroleum Accountants

Relevant for petroleum accountants who need stronger understanding of participating interests, partner allocations and the financial mechanics behind PSC and JV structures.

Commercial Managers

Useful for commercial professionals assessing ownership changes, farm-in and farm-out transactions, carried interest and unitisation arrangements.

JV Managers

Supports JV managers responsible for partner relationships, funding obligations, expenditure approvals and financial performance across operated and non-operated interests.

Financial Planning and Analysis Professionals

Relevant for FP&A teams responsible for forecasting expenditure, analysing partner cash flow and supporting corporate financial planning.

Treasury Professionals

Designed for treasury specialists who need greater visibility of future partner funding requirements and cash call forecasts.

Finance Managers and Controllers

Provides senior finance professionals with a structured approach to reviewing financial models, assumptions, allocations and partner-level outputs.

Asset Finance Teams

Suitable for finance personnel supporting upstream assets where multiple partners share capital expenditure, operating expenditure and production interests.

Commercial and Investment Analysts

Useful for analysts assessing ownership structures, partner economics, transaction scenarios and asset-level financial outcomes.

Senior Finance and Commercial Leaders

Appropriate for managers and senior professionals responsible for financial governance, JV performance, investment decisions and partner negotiations.

Course outline

PSC and JV Financial Modelling Foundations

This module establishes the financial modelling framework required for PSC and JV environments. It examines how ownership, expenditure, production, revenue and partner obligations interact within an integrated financial model. Participants develop a structured understanding of the relationship between asset economics and partner-level financial outcomes.

Cash Calls and Partner Funding Models

This module focuses on cash call forecasting and the relationship between expenditure forecasts and partner funding obligations. Participants examine how expected capital and operating expenditure is converted into partner-level cash requirements and how changes in asset forecasts affect future funding needs.

Carried Interest and Farm-In and Farm-Out Modelling

This module addresses ownership transactions and funding structures that create additional complexity within PSC and JV financial models. Participants examine carried interest, farm-in and farm-out transactions and the financial effect of changes in participating interests.

Equity Redetermination and Unitisation Modelling

This module examines situations where ownership interests change because of equity redetermination or unitisation. Participants assess how revised ownership structures affect cost allocation, production entitlement, funding

obligations and partner financial positions.

Integrated Partner Economics and Model Application

This module brings the preceding techniques together within an integrated PSC and JV financial modelling environment. Participants apply participating interest modelling, cash call forecasting, carried interest, farm-in and farm-out modelling, equity redetermination and unitisation concepts to interconnected financial scenarios.

Scheduled dates

Dates	Venue	Format	Fee
12 - 16 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,000
12 - 16 Oct 2026	Abuja, Nigeria	In person	£4,000
12 - 16 Oct 2026	Accra, Ghana	In person	£4,000
12 - 16 Oct 2026	Addis Ababa, Ethiopia	In person	£4,000
12 - 16 Oct 2026	Al Ain, United Arab Emirates	In person	£4,000
12 - 16 Oct 2026	Al Khobar, Saudi Arabia	In person	£4,000
