

Petroleum Industry Accounting Fundamentals: Successful Efforts vs Full-Cost Training Course

OGI-1090 · 5 days · 15 CPD hours · English

Overview

Petroleum Industry Accounting Fundamentals: Successful Efforts vs Full-Cost Training Course from Institute For Oil & Gas Training develops practical accounting capability for professionals responsible for recording, analysing and controlling exploration, development and production costs across the petroleum value chain. The course focuses on the accounting decisions that determine how petroleum expenditures are classified, capitalised, depreciated, depleted, impaired and reported.

Oil and gas accounting requires a clear understanding of the relationship between exploration activity, development investment, producing assets, unsuccessful wells, reserves and financial reporting. Organisations operating in upstream petroleum environments manage substantial expenditure across geological studies, seismic surveys, acreage acquisition, drilling, completion, production facilities and field development. The accounting treatment applied to these expenditures directly affects asset values, reported earnings, cost allocation and management information.

This course provides a structured examination of the two established approaches to upstream petroleum accounting: the Successful Efforts method and the Full-Cost method. Participants examine how each approach treats exploration expenditure, successful wells, unsuccessful wells, unproved property, development costs and production assets. Particular attention is given to capitalisation policy, expensed exploration costs, cost centre pooling, dry hole accounting, depletion depreciation and amortisation, ceiling test requirements and the impairment of oil and gas assets.

The programme addresses a critical skills gap between petroleum operations and financial reporting. Accounting professionals need to understand the operational events behind accounting entries, while finance and management teams need reliable information for investment decisions, budgeting, performance analysis and asset evaluation. Institute For Oil & Gas Training connects these requirements through practical petroleum accounting scenarios based on the commercial realities of exploration and production activities.

Successful Efforts accounting requires expenditure to be assessed according to the outcome and nature of the underlying exploration or development activity. Costs associated with unsuccessful exploration activities receive different treatment from expenditures connected with successful discoveries and commercially developed properties. The Full-Cost approach uses a different pooling concept in which qualifying exploration and development expenditure is accumulated within defined cost centres and subsequently recovered through depletion and related accounting mechanisms.

The distinction between these approaches has important consequences for financial statements and management reporting. Capitalisation decisions influence the carrying value of petroleum assets, while depletion and impairment processes affect subsequent expense recognition. A robust capitalisation policy therefore requires more than an

understanding of accounting terminology. It requires consistent judgement, documented procedures, reliable cost classifications and alignment between accounting records and petroleum project information.

The course also examines the accounting treatment of dry holes, exploratory wells, unproved property and other costs incurred before commercial production is established. Participants develop a clearer understanding of how accounting teams evaluate costs at different stages of the petroleum lifecycle and how cost centre pooling operates under the Full-Cost approach.

Institute For Oil & Gas Training delivers this course as a corporate capability programme for organisations seeking stronger petroleum accounting controls, more consistent financial reporting and improved understanding between accounting, finance, engineering, exploration and asset management teams. The content supports professionals who need to interpret petroleum accounting requirements while maintaining commercially relevant reporting practices.

Objectives

- Understand the foundations of Petroleum Industry Accounting Fundamentals across exploration, development and production activities
- Distinguish clearly between Successful Efforts and Full-Cost accounting approaches
- Establish consistent capitalisation policy principles for petroleum expenditures
- Assess the treatment of exploration and development expenditure
- Identify circumstances in which exploration costs are expensed
- Understand the accounting treatment of successful and unsuccessful wells
- Apply appropriate dry hole accounting principles to exploration activities
- Understand the treatment of unproved property within petroleum accounting
- Apply cost centre pooling concepts under the Full-Cost approach
- Understand depletion depreciation and amortisation for petroleum assets
- Examine the role of ceiling test requirements in Full-Cost accounting
- Recognise the accounting implications of impairment of oil and gas assets
- Improve communication between petroleum operations and finance teams

- Strengthen the consistency and documentation of petroleum accounting decisions
- Interpret relevant financial reporting requirements affecting upstream petroleum activities
- Improve the quality of management information supporting petroleum investment and asset decisions

Training methodology

Practical Petroleum Accounting Cases

The course uses realistic petroleum accounting cases covering exploration, drilling, appraisal, development and production activities. Participants work through expenditure scenarios and determine appropriate accounting treatment based on the nature and outcome of each activity.

Successful Efforts and Full-Cost Comparisons

Comparative exercises demonstrate how the two accounting approaches produce different treatment for qualifying expenditures. Participants analyse capitalisation decisions, expensed exploration costs, cost centre pooling and subsequent depletion.

Exploration and Drilling Scenarios

Real-world scenarios involving successful wells, dry holes, unproved property and development activities provide a practical basis for examining accounting entries and asset classification.

Cost Classification Exercises

Participants review petroleum expenditure categories and determine whether costs should be capitalised, expensed, accumulated within a cost centre or considered in subsequent impairment and depletion calculations.

Asset Impairment Simulations

Case-based impairment exercises demonstrate how petroleum assets are assessed when carrying amounts require review. Participants examine the relationship between asset values, recoverability considerations and accounting adjustments.

Group-Based Decision Exercises

Small-group exercises replicate cross-functional discussions between accounting, finance, exploration, drilling and asset management teams. This approach strengthens communication around accounting decisions that depend on operational information.

Management Reporting Scenarios

Participants examine how petroleum accounting treatment affects management information, asset values, expenditure trends and financial reporting. The methodology focuses on practical interpretation rather than

theoretical memorisation.

Organisational impact

Stronger Capitalisation Controls

The course supports organisations in establishing clearer approaches to petroleum expenditure classification. Consistent capitalisation policy decisions improve the reliability of asset registers and reduce inconsistent treatment between projects, fields and accounting teams.

Improved Financial Reporting Quality

A stronger understanding of Successful Efforts and Full-Cost accounting helps finance teams apply appropriate treatment to exploration, development and production expenditure. This supports more consistent financial reporting across petroleum operations.

Better Cost Visibility

Understanding cost centre pooling, expenditure classification and asset-level accounting improves visibility over where petroleum expenditure is accumulated and how costs flow into subsequent financial reporting.

More Effective Asset Management

The treatment of petroleum assets influences how management interprets asset values, investment requirements and field performance. Stronger accounting capability gives asset management teams better insight into the financial implications of operational decisions.

Better Exploration Cost Control

Exploration programmes generate significant expenditure before commercial production is established. A clear understanding of expensed exploration costs, unproved property and dry hole accounting strengthens control over how exploration expenditure is captured and reported.

More Consistent Impairment Assessment

The course strengthens organisational understanding of impairment of oil and gas assets. Finance and asset teams gain a common framework for identifying accounting considerations when the carrying value of petroleum assets requires assessment.

Improved Depletion and Asset Cost Recovery

Accurate depletion depreciation and amortisation processes depend on appropriate asset classification and cost accumulation. The course helps organisations improve the connection between capitalised costs, producing properties and subsequent expense recognition.

Stronger Cross-Functional Coordination

Petroleum accounting depends on operational information from exploration, drilling, engineering and asset management teams. Shared understanding of accounting requirements improves communication between finance and operational departments.

Reduced Classification Inconsistency

Inconsistent treatment of similar petroleum expenditures creates reporting challenges and weakens comparability. The course supports more structured decision-making around expenditure classification and accounting treatment.

Improved Management Decision Support

Accurate petroleum accounting information provides management with clearer insight into expenditure patterns, asset values and the financial consequences of exploration and development decisions. This strengthens the usefulness of financial information for planning and asset management.

Personal impact

Stronger Petroleum Accounting Capability

Attendees develop practical knowledge of upstream petroleum accounting processes and the commercial activities that generate the underlying transactions.

Greater Confidence in Accounting Decisions

Participants gain a structured approach to evaluating capitalisation, expensing, cost pooling, asset classification and depletion decisions.

Improved Understanding of Successful Efforts Accounting

Finance professionals develop a clearer understanding of how successful and unsuccessful exploration activities affect accounting treatment under the Successful Efforts approach.

Improved Understanding of Full-Cost Accounting

Participants understand how qualifying costs are accumulated through cost centre pooling and how these costs subsequently interact with depletion and ceiling test requirements.

Better Operational and Financial Communication

Attendees become better equipped to communicate with petroleum engineers, geoscientists, drilling teams, project managers and asset managers about the financial implications of operational activities.

Stronger Analytical Skills

Case exercises strengthen the ability to interpret petroleum expenditure, identify relevant accounting treatment and evaluate the effect of accounting decisions on asset values and financial reporting.

Broader Career Capability

The knowledge gained supports professionals working across petroleum accounting, financial control, finance, audit, commercial management, asset management and petroleum operations where accounting information forms part of business decision-making.

Who should attend

Petroleum Accountants

Designed for accountants responsible for exploration, development and production transactions who require stronger knowledge of petroleum-specific accounting treatment.

Financial Controllers

Relevant for financial controllers overseeing petroleum asset reporting, expenditure classification, accounting policies and financial control processes.

Finance Managers

Useful for finance managers who need to understand the financial consequences of upstream investment and petroleum accounting decisions.

Exploration and Production Finance Professionals

Built for finance specialists supporting exploration and production activities who need to connect operational expenditure with financial reporting.

Asset Managers

Relevant for asset managers responsible for field performance, development decisions and the financial interpretation of petroleum assets.

Commercial Managers

Supports commercial professionals who need to understand how petroleum expenditure and accounting treatment influence project and asset information.

Petroleum Engineers

Useful for petroleum engineers who interact with finance teams and need to understand the accounting consequences of exploration, development and production decisions.

Drilling and Well Operations Professionals

Relevant for drilling and well personnel involved in activities that generate successful well costs, dry holes and related exploration expenditure.

Internal Audit Professionals

Designed for auditors reviewing petroleum expenditure classification, capitalisation, asset accounting and financial control processes.

Management Accountants

Supports management accountants responsible for petroleum cost analysis, reporting, budgeting and management information.

Senior Finance and Accounting Professionals

Suitable for experienced professionals seeking stronger specialist capability in petroleum accounting approaches and asset accounting processes.

Course outline

Foundations of Petroleum Industry Accounting

This module establishes the accounting framework for exploration and production activities. It examines the petroleum value chain from exploration and appraisal through development and production, with emphasis on how operational activities generate accounting transactions and financial reporting requirements.

Successful Efforts Accounting and Exploration Cost Treatment

This module examines the Successful Efforts approach and the principles used to distinguish successful exploration expenditure from costs associated with unsuccessful activities. Particular attention is given to expensed exploration costs, dry hole accounting and the treatment of unproved property.

Full-Cost Accounting and Cost Centre Pooling

This module focuses on the Full-Cost approach and the accumulation of qualifying petroleum expenditures within defined cost centres. Participants examine cost centre pooling, capitalised costs, unproved property and the subsequent recovery of accumulated costs through depletion.

Depletion, Depreciation, Amortisation and Asset Impairment

This module examines the subsequent accounting treatment of capitalised petroleum assets. It focuses on depletion depreciation and amortisation, impairment of oil and gas assets and the processes used to evaluate whether recorded asset values remain supportable.

Ceiling Tests, Financial Reporting and Integrated Petroleum Accounting

This module integrates the accounting concepts covered throughout the course and focuses on the ceiling test, financial reporting implications and practical comparison of Successful Efforts and Full-Cost outcomes. Participants consolidate their understanding through integrated petroleum accounting scenarios.

Scheduled dates

Dates	Venue	Format	Fee
18 - 22 Jan 2027	Abu Dhabi, United Arab Emirates	In person	£3,800
18 - 22 Jan 2027	Abuja, Nigeria	In person	£3,800
18 - 22 Jan 2027	Accra, Ghana	In person	£3,800
18 - 22 Jan 2027	Addis Ababa, Ethiopia	In person	£3,800
