

Petroleum Taxation Fundamentals for the Value Chain

Training Course

OGI-1084 · 5 days · 15 CPD hours · English

Overview

Petroleum Taxation Fundamentals for the Value Chain is a specialist corporate training course from Institute For Oil & Gas Training designed to build practical capability in petroleum taxation across the upstream, midstream and downstream value chain. The course develops a clear working understanding of petroleum taxation fundamentals, including petroleum profits tax, corporate income tax, ring fencing rules, taxable income computation, allowable deductions, capital allowances, tax losses and carry forward, uplift and investment allowances, and tax base determination.

Oil and gas taxation directly influences project economics, investment appraisal, cash flow forecasting, commercial structuring and financial reporting. Petroleum operations involve complex revenue streams, substantial capital expenditure, long project cycles and significant differences between exploration, development, production, transportation, processing, refining and marketing activities. Finance and commercial teams therefore require a practical understanding of how taxation interacts with the entire value chain.

[Institute For Oil & Gas Training](#) delivers this course for professionals who need to interpret petroleum tax requirements and connect tax rules with operational and financial decisions. The programme focuses on how taxable income is established, how deductions and allowances affect tax liabilities, how losses are treated, and how ring fencing influences the calculation and utilisation of taxable results between different petroleum activities.

The course addresses a common organisational skills gap between technical operations, commercial decision-making and tax compliance. Petroleum engineers, accountants, finance professionals, commercial managers, tax specialists and project teams often work with the financial consequences of petroleum taxation without sharing the same practical framework for assessing those consequences. This programme establishes a common understanding that supports stronger communication between functions.

Participants examine the relationship between gross petroleum revenues, operating expenditure, capital expenditure, depreciation and tax allowances, deductible costs, taxable profits and resulting tax obligations. The course also considers how tax base determination affects project economics and how tax rules influence investment decisions across different stages of the petroleum value chain.

Petroleum profits tax is addressed alongside corporate income tax, allowing participants to distinguish between general corporate taxation principles and petroleum-specific tax mechanisms. The programme also explores ring fencing rules, which are particularly important when determining whether income, expenditure and tax losses can be offset between separate petroleum activities.

A practical approach is used throughout the course. Participants work through structured examples involving taxable income computation, allowable deductions, capital allowances, tax losses and carry forward, uplift and investment allowances, and tax base determination. The emphasis is on applying taxation concepts to business situations rather

than treating tax provisions as isolated technical rules.

The programme also develops awareness of how taxation affects the commercial interpretation of petroleum projects. Tax is not considered solely as a compliance obligation. It forms part of the financial architecture of exploration and production activities and influences cash flow, project returns, investment timing and commercial planning.

Because petroleum taxation frameworks differ between jurisdictions, the course focuses on transferable principles while identifying where jurisdiction-specific legislation, tax authority guidance and petroleum agreements determine the applicable treatment. Participants gain a structured method for reviewing relevant rules and applying them within their organisational responsibilities.

Institute For Oil & Gas Training positions the programme for professionals working across the petroleum value chain who require stronger tax awareness, more consistent financial analysis and improved collaboration between tax, finance, commercial and operational teams.

Objectives

- Explain the fundamental principles of petroleum taxation across the oil and gas value chain
- Distinguish petroleum profits tax from corporate income tax and identify their respective business implications
- Explain how petroleum revenues and expenditure contribute to taxable income computation
- Determine the principles used to establish the petroleum tax base
- Assess the treatment of allowable deductions in petroleum taxation
- Explain the role of capital allowances in petroleum tax calculations
- Analyse tax losses and carry forward mechanisms within applicable tax frameworks
- Explain ring fencing rules and their implications for separate petroleum activities
- Understand the purpose and application of uplift and investment allowances
- Connect petroleum taxation principles with project economics and financial planning
- Improve communication between tax, finance, commercial and operational teams
- Identify tax-sensitive issues requiring specialist review
- Apply structured approaches to petroleum tax analysis using practical business scenarios

- Strengthen awareness of documentation and compliance requirements supporting petroleum tax positions
- Interpret petroleum tax concepts in the context of investment, development and production decisions

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery model designed around the financial and commercial realities of oil and gas operations. The training combines technical explanation with practical application so participants understand both the underlying taxation principles and their implications for petroleum businesses.

Case studies are used to demonstrate how petroleum taxation applies to realistic business situations. Participants review simplified petroleum projects involving revenue generation, operating costs, capital investment, taxable income and tax liabilities. These cases help participants connect individual tax concepts with wider business decisions.

Tax computation exercises provide practical experience in determining taxable income. Participants work through the treatment of revenues, allowable deductions, capital allowances, tax losses and other relevant adjustments. The exercises reinforce the distinction between accounting results and tax results.

Ring fencing scenarios demonstrate how separate petroleum activities can affect the availability of deductions and tax losses. Participants examine how different project structures influence tax calculations and understand why ring fencing rules require careful consideration during financial analysis.

Commercial simulations connect taxation with project economics. Participants assess how different tax treatments affect cash flow and project-level financial outcomes. This supports better communication between finance, tax, commercial and operational functions.

Group exercises encourage participants from different professional backgrounds to examine the same tax issue from different perspectives. Finance professionals can consider reporting implications, commercial professionals can consider project economics, and operational professionals can consider the underlying activities generating taxable costs and revenues.

Real-world scenarios are incorporated to strengthen practical judgement. Participants consider issues such as capital expenditure classification, deductible operating costs, tax loss utilisation and investment-related allowances within petroleum business contexts.

The methodology also encourages structured interpretation of legislation and regulatory guidance. Participants learn to identify the relevant tax rule, establish the applicable tax base, determine the treatment of income and expenditure, and assess the resulting tax position.

Organisational impact

The sponsoring organisation gains stronger internal capability for understanding the tax consequences of petroleum operations. By developing a common technical foundation across finance, tax, commercial and operational teams, the course supports more consistent analysis and communication.

Improved understanding of tax base determination strengthens the quality of financial assessments supporting petroleum projects. Teams become better equipped to identify the revenues and costs that influence taxable results and to distinguish tax considerations from purely accounting considerations.

Greater familiarity with allowable deductions helps professionals assess the tax treatment of operational expenditure more systematically. This supports stronger internal review processes and improves the quality of information provided to tax and finance functions.

Knowledge of capital allowances strengthens the connection between investment expenditure and petroleum tax calculations. Project teams gain greater awareness of how capital-intensive activities interact with tax obligations and financial planning.

Understanding tax losses and carry forward supports more informed assessment of project-level tax positions. Professionals gain a clearer view of how losses interact with taxable profits under applicable rules and why the timing and availability of losses require careful analysis.

Greater awareness of ring fencing rules helps organisations identify situations where income and expenditure from separate petroleum activities require separate treatment. This reduces the risk of inappropriate assumptions when assessing project profitability and tax exposure.

The course also improves cross-functional collaboration. Finance, tax, commercial and operational professionals develop shared terminology for discussing petroleum taxation. This supports clearer communication during budgeting, forecasting, project evaluation, investment planning and tax review activities.

For management teams, stronger tax awareness supports better identification of tax-sensitive commercial decisions. The programme provides participants with a structured basis for escalating complex matters to specialist tax advisers or internal tax teams when detailed jurisdiction-specific interpretation is required.

The organisational benefit extends to compliance awareness. Participants understand the importance of maintaining appropriate supporting information for taxable income, deductions, capital expenditure, losses and other tax positions. Stronger awareness contributes to more disciplined internal tax processes.

Personal impact

Participants develop a practical understanding of petroleum taxation that strengthens their effectiveness within finance, tax, commercial and operational roles.

Finance professionals improve their ability to connect accounting information with petroleum tax calculations. They gain greater confidence in reviewing taxable income, deductions, capital allowances and tax losses.

Tax professionals strengthen their ability to communicate petroleum taxation concepts with non-tax colleagues. This supports more effective collaboration with commercial, engineering, project and operational teams.

Commercial professionals gain a stronger understanding of how tax affects project economics and commercial assessments. This helps them recognise tax-sensitive assumptions when reviewing petroleum projects and business proposals.

Operational and technical professionals develop awareness of how operational decisions can generate tax consequences. This supports more informed interaction with finance and tax teams.

Managers gain a structured framework for discussing petroleum tax issues, reviewing financial information and identifying areas requiring specialist attention.

The course also strengthens professional capability in interpreting petroleum tax rules. Participants learn to approach tax questions systematically by identifying the applicable framework, determining the relevant tax base, analysing income and expenditure, and assessing the resulting tax position.

These capabilities support stronger performance in budgeting, financial modelling, project evaluation, tax planning, reporting, compliance coordination and commercial decision-making.

Who should attend

- Petroleum Tax Professionals — To strengthen practical understanding of petroleum-specific tax calculations and value chain taxation.
- Tax Managers and Tax Advisers — To develop stronger capability in petroleum profits tax, corporate income tax and tax base analysis.
- Finance Managers and Accountants — To improve understanding of the relationship between accounting results and taxable income.
- Financial Analysts — To incorporate relevant taxation principles into petroleum project and financial analysis.
- Commercial Managers — To understand the financial and commercial implications of petroleum taxation.
- Project Managers — To recognise tax considerations affecting capital-intensive petroleum projects.
- Petroleum Economists — To integrate tax assumptions into project economics and investment analysis.
- Planning and Budgeting Professionals — To improve the treatment of tax-related assumptions within budgets and forecasts.
- Business Development Professionals — To strengthen awareness of taxation when evaluating petroleum opportunities and commercial structures.
- Investment and Portfolio Professionals — To understand how tax provisions influence petroleum project and portfolio assessments.

- Upstream Finance Teams — To develop stronger knowledge of taxation affecting exploration, development and production activities.
- Midstream Finance and Commercial Teams — To understand relevant taxation considerations across transportation, processing and related activities.
- Downstream Finance and Commercial Teams — To strengthen awareness of taxation affecting refining, distribution and petroleum product activities.
- Senior Finance and Commercial Executives — To improve strategic understanding of petroleum taxation and its relationship with business performance.
- Legal and Contract Professionals — To strengthen their understanding of the tax concepts relevant to petroleum agreements and commercial arrangements.

Course outline

Foundations of Petroleum Taxation Across the Value Chain

This module establishes the core principles required to understand petroleum taxation across exploration, development, production, transportation, processing, refining and related commercial activities. It introduces the relationship between petroleum revenues, costs, taxable income and government taxation requirements.

Taxable Income Computation and Allowable Deductions

This module focuses on the practical calculation of taxable income and the treatment of costs incurred during petroleum operations. Participants examine how revenues and expenditure are assessed when establishing the taxable result.

Capital Allowances, Investment Allowances and Tax Losses

This module examines the taxation of capital-intensive petroleum expenditure and the mechanisms used to recognise qualifying investment for tax purposes. It also addresses the treatment of tax losses and carry forward.

Ring Fencing, Tax Base Determination and Project-Level Tax Analysis

This module addresses the application of ring fencing rules and their relationship with project-level taxation. Participants examine how separate petroleum activities can affect the treatment of income, expenditure and tax losses.

Integrated Petroleum Tax Analysis, Compliance and Commercial Application

This module brings together the principles covered throughout the programme and applies them to integrated petroleum business scenarios. Participants consolidate their understanding of petroleum profits tax, corporate income

tax, deductions, capital allowances, tax losses, ring fencing and tax base determination.

Scheduled dates

Dates	Venue	Format	Fee
18 - 22 Jan 2027	Cairo, Egypt	In person	£4,000
18 - 22 Jan 2027	Abu Dhabi, United Arab Emirates	In person	£4,000
18 - 22 Jan 2027	Abuja, Nigeria	In person	£4,000
18 - 22 Jan 2027	Accra, Ghana	In person	£4,000
